RFU-54+AFC-566FKT+MKU-54

The RFU-54 keeps feeding with the miss feed reject function.

Features

- The RFU-54 can be attached or detached to the folder without removing the standard flat pile feeding table on the folder.
- The RFU-54 provides stable and reliable feeding for various type of sheet such as parallel folded signatures, 8-page folded signatures, and curled sheets.
- When the double sheet feeding happens, the sheets are rejected to the error feed tray for continuous feeding operation. Rejected sheets are not counted on the preset counter. (Depending on the feed interval or belt speed, double fed sheets may not be rejected.)
- The magnetic valve controlled feed rotor smoothly delivers sheets without sheet scratching.
