

Notice of Specification Changes for iCE LiNK Editions

May 1st, 2025

Horizon International Inc.

Dear Valued Customers,

Thank you for using iCE LiNK.

We wish to inform you that we will revise the edition structure of iCE LiNK, changing from three editions to two editions.

1. Overview of Edition Changes

We will discontinue the "Automation" edition and modify the "IoT Basic" edition.

Automation Edition (To Be Discontinued)

The Automation edition, will be discontinued due to the majority of users opting for the "Enterprise" edition.

- For Customers Using the Automation Edition

Customers currently using the Automation edition will be automatically migrated to the Enterprise edition. During the validity period of the current subscription, you can continue using Enterprise without additional charges. However, please note that upon renewal, the Enterprise edition pricing will apply.

IoT Basic Edition (To Be Changed)

IoT Basic will be transformed into an edition limited to Machine Dashboard Functionality and Connected Machine Service Support. As part of this change, the following features will be removed:

- KPI Analysis Functionality
- Barcode Job Operation Functionality

If you require advanced job management or automation features, please upgrade to the "Enterprise" edition.

Date Effective:

These changes will be applied starting from version 3.7, scheduled for release in September 2025.

2. New Features in the Enterprise edition from version 3.5

The Enterprise edition will introduce CSV/XML-based job management features for enhanced and flexible job control.

1. Automated Job Creation for Monitoring/Management Using CSV/XML

Even if you do not have a JDF-compatible MIS system, you can now register jobs using CSV or XML files.

2. Management Functions Equivalent to JDF Jobs and Printer Dashboard Functions.

3. Support for Machine Setup Data

The job management function using CSV/XML does not provide automated setup data for binding and other machines. However, by utilizing "Ultimate Bindery," you can apply setup data to jobs created in CSV/XML format, just like with the JDF Jobs function.

Additionally, we are preparing an update that will make our services even more accessible and user-friendly. Details will be announced shortly so please check back again soon.

Thank you for your continued support of iCE LiNK, we will continue to further strengthen our features to support your operational efficiency and productivity improvement.
