VALEZUS Series Supports iCE LiNK Printer Dashboard
Printer and Postpress Status on a Single Screen

Horizon International Inc. (Horizon) announces that RISO KAGAKU CORPORATION's production printers, VALEZUS T2200 and VALEZUS T1200 (for overseas markets), are now supported by the Printer Dashboard in Horizon's iCE LiNK workflow system.

With this support, iCE LiNK Printer Dashboard can display the operating status of VALEZUS printers and Horizon postpress equipment on a single screen. This gives operators a consolidated view of printing and postpress equipment and makes overall production status easier to monitor.

■ Printer and Postpress Status in Printer Dashboard

iCE LiNK digitally connects printing and postpress processes to support production monitoring and job management.

Printer Dashboard displays the operating status of supported digital printers and Horizon postpress equipment on a single screen.

Support for VALEZUS T2200 and VALEZUS T1200 makes it easier to monitor both high-speed inkjet printing and postpress processes.

■ Supported models

- VALEZUS T2200
- VALEZUS T1200 (for overseas markets)

■ Expanding Connectivity

Production sites often use separate management screens for digital printers, postpress equipment, and related workflow systems. This can make it difficult to see overall production status.

Horizon continues to expand connectivity between iCE LiNK and printers, postpress equipment, and workflow systems.

Support for the VALEZUS series is part of this effort. Horizon will continue to connect information from printing through postpress to improve production visibility and management.

About iCE LiNK

iCE LiNK is Horizon's workflow system for connecting Horizon postpress equipment with printers and workflow systems over a network, supporting production management and visualization. Printer Dashboard provides a consolidated view of the operating status of supported printers and postpress equipment.

*Supported functions may vary depending on the connected model and system configuration. Product availability varies by country or region.
