ICE STITCHLINER MARK III (X4) • RD-N4055DM • ICE FOLDER AFV-566FKT
ROBOTIC ARM BINDING SOLUTION • AFV-566F • CRF-362

CUTTING EDGE COLLABORATION

Since 1999, SAXOPRINT has continually expanded its production capacity, product range, market reach, and innovation to meet growing demands. One of its latest investments is a fully integrated inline solution featuring the Canon varioPRINT iX-series Inkjet Cutsheet Press and the Horizon ICE STITCHLINER Mark IV cutsheet saddle stitching system. This advanced setup transforms blank sheets into finished products in a single pass—managed by just one operator.

“We work with only one employee in this inline process.”

- Richard Müller, SAXOPRINT Business Development Manager

INLINE SADDLE STITCHING SYSTEM WORKFLOW

Blank sheets are loaded into the iX3200's paper tray and printed using high-speed inkjet technology at rates of up to 320 A4 sheets per minute. After printing, the sheets pass through a two-step drying process to ensure optimal ink adhesion and stability. They are then transported flat to the Horizon ICE STITCHLINER Mark IV for post processing. In the Mark IV the sheets are accumulated, stitched, and trimmed into finished booklets. **A single operator oversees the entire process, collecting the finished booklets at the delivery, packaging them for shipment, and sending them off efficiently.** This seamless end-to-end workflow ensures rapid production turnaround while maintaining exceptional print and finishing quality.

WHY SAXOPRINT AUTOMATES

The cutting-edge system collaboration is just the beginning. SAXOPRINT's facility puts automation at the forefront of everything they do and it's notable in all production processes and each area of the facility, enabling them to efficiently fulfill thousands of orders for a wide range of products every single day.

WHEN ASKED ABOUT THE DECISION TO AUTOMATE:

"First of all we will supply our customers faster, error free, and the best quality. This is very important for us. The customer is the main thing here in our company. I think if the machine works better then our employees can work better for our customers."

- Richard Müller, SAXOPRINT Business Development Manager

SAXO-STRONG PARTNERSHIP

SAXOPRINT has partnered with Horizon since 2015, acquiring an impressive amount of equipment in all five finishing processes: folding, binding, collating, trimming, and stitching. When asked about his partnership with Horizon, Richard explained that they not only have a strong partnership in the post press department but in all of their departments. Building relationships is the core of SAXOPRINT and it extends beyond the customer.

Working closely with Horizon GmbH, SAXOPRINT is continually pushing forward with innovative projects. Working with a trusted team on both sides opens the door for so many new possibilities. Thank you SAXOPRINT for choosing Horizon, we are honored to help make your projects a reality.
