## CREASING AND FOLDING

# CRF-362 

## Creasing and folding in one pass.

## CREASING AND FOLDING FOR HEAVIER SHEETS IN ONE PASS.

## Avoid cracking of digitally-printed stocks.

## BENEFITS

## APPLICATION FLEXIBILITY

Suitable for creasing covers, restaurant menus, shop cards, invitation cards and laminated sheets.
The impact creaser avoids cracking on digitally-printed applications.

## PERFECT BOOK COVERS

High quality creasing helps to prepare high quality perfect bound book covers. Spine, hinge and flap creases can be properly produced by selecting up or down creasing.

## HIGH QUALITY

Two fold knives are equipped for high quality folding, even on heavy stocks. 6 different folding patterns can be set up simply by using the icon based touch screen.

## USER-FRIENDLY OPERATION

Quick and easy set-up and operation can be performed through the newly equipped high resolution color touch screen.

## MANAGE YOUR BINDERY WITH HORIZON'S BINDERY CONTROL SYSTEM

The system can be enhanced with automated workflow from upstream to post-press with iCE LiNK, which uses cloud technology, Horizon's post-press management system.

## SHEET FLOW

## Creasing

There are three types of the creasing; only creasing, creasing on covers for binding and creasing for folding.
Perforation can be also made using the optional PRF-36 Impact Perforation Unit.

- Only Creasing

- Creasing on Covers for Perfect Binding (Creasing Patterns)

One Line (For a thin book)

Two Lines (Spine Only)

Four Lines (Spine and Hinge)

Five Lines with Flap (Spine, Hinge and Flap)

Five Lines with Flap (Spine, Hinge and Flap)

Six Lines with Double Flap (Spine, Hinge and Double Flaps)

## Folding

After the creasing, the sheets are folded in the following fold patterns.

Parallel Fold

Accordion Fold

Short Fold

Letter Fold

Double Parallel Fold

Open Gate Fold

Open Gate Fold (with creasing line)

## DETAILS FOR EACH DEVICE.

- When operated without folding, the creaser can process 400 gsm for heavier stocks.
(The stopper for long sheets is necessary.)

- The support table for longer sheets is used when the sheet length is 650 mm or 25.5 " or longer. The maximum sheet length which can be loaded is 865 mm or
 34.0".

## 1 touch panel

Newly equipped high resolution touchscreen provides intuitive operation. Changeovers including fold pattern, creasing number and up / down crease selection can be done easily at this screen. Up to 200 jobs can be stored in memory for easy recall.

## 4 Quality creasing

Up to 10 creasing lines can be performed in one pass. Creasing depth can be adjusted. Up and down creasing are performed in one pass. Creasing positions can be adjusted in increments of 0.1 mm or 0.004".

## 2 reliable sheet feding

Uniquely designed suction belt feeding system enables stable feeding performance even with heavier sheets. An ultrasonic sensor ensures miss or double detection regardless of the print image or thickness of
 sheets.

## 3 sheet registration

Sheets align to the register guide to ensure straight feeding for accurate creasing and folding. Sheet skew can be adjusted by changing the transport roller pressure on the registration guide.

## 6 DUAL DELIVERY

Folded jobs are delivered to the upper conveyor and neatly stacked for easy job handling. Flat creased jobs are delivered to the lower tray.

## OPTIONS.

## Performance Enhancing Options.

## | CREASING UNIT

Creasing units for different widths of creasing lines are available.
The following creasing units are available as options:

- Positive creasing unit for 0.5 mm or $0.020^{\prime \prime}$ (thin)
- Positive and negative creasing units for 2.0 mm or $0.079^{\prime \prime}$ (thick)

Crease width

## | PRF-36 IMPACT PERFORATION UNIT

First creasing unit can be replaced with the impact perforating unit to make the perforation vertically to the transport direction.
